## Summary

My main goal is to become a software engineer one day. I started to learn all this skills because I noticed that I had a partiality about how things work. I took a shot, and now I want to make a change in life for the better. I know how to build scripts without actually typing it on the computer. That require a skill called developing.

- \*Linux Operating system for server or home applications
- \*Windows Powershell Understanding and Usability
- \*Python Profecit skill to Read, Write with a Environment System in Place
- \*Personal Software Development
- \*Very little Hardware Engineering (Raspberry PI, Pico)
- \*Self-learned all the skills for Programing.
